H B Rhodes

On Friday, February 28 Mr Robert Kelly of the New York State Department of Labor visited the Elkem site to obtain wipe tests and soil samples to confirm that radioactive contamination is below the limits specified for license termination

Re License No 210-0090

The sealed sources for the portable isotope analyzers together with some thorium chemicals were stored in a locked cabinet in Lab 357 of Building 166 Several wipe tests were taken inside the cabinet and throughout Lab 357 Wipe tests were also taken in four other labs on the third floor of Building 166 where thorium chemicals may have been used

Re License No 950-0139

A diesel powered post hole digger operated by Dube Construction Company was unable to penetrate the frost layer of the area behind Building 166 that had previously been excavated to remove soil contaminated with thorium ores As a result, the ten samples Mr Kelly required could not be obtained He promised to return as soon as the ground thaws

In summary, if the wipe tests are negative, License No 210-0090 will be terminated; samples of the area behind Building 166 remain to be taken to confirm radiation is below the level specified Termination of License 950-0139 is contingent on these results
